

A new sewer network for Garvestone

We'll be building a new sewer network in Garvestone.

We received an application for a first time sewerage project and after looking into it, a new sewer network was the best option to prevent pollution in the area.

Why now?

We plan and deliver our projects in five-year blocks, called AMP cycles (short for Asset Management Plan). These cycles are set and reviewed by our regulator, Ofwat, to make sure we're improving our services in a way that benefits customers and the environment.

The current AMP cycle runs from 2025 to 2030, and this is when we'll be carrying out the project in your village. It's part of our commitment to investing in communities, improving wastewater services, and protecting the environment.

We're currently in the planning stages of the project and carrying out the work needed before construction can begin. Once we have confirmation when our work will start on site, we'll be in touch to let you know what to expect and keep you updated as our plans progress.

What happens next?

Your application has been successful and we're now beginning the early planning stages of the new sewer network. As part of this, we will need to carry out some investigation work to help us better understand the area and support of the new system.

We'll be in touch with you and the wider community once we have more information about these investigations and our plans moving forward, and we'll continue to keep everyone updated as the project progresses.

Need to get in touch?

We'll keep you updated as things progress, so you know what to expect every step of the way. But if you need to get in touch with us you can email us at

What's an S101a project?

Under Section 101A of the Water Industry Act 1991, water companies like ours have a legal duty to provide a public sewer where properties are not currently served by one and meet specific criteria.

An S101a project is all about providing a public sewer network for homes that don't currently have one. Sometimes properties rely on private drainage systems, but these aren't always up to scratch. When we get an application from residents or the local council, we assess the situation. If it meets certain criteria, we take on the legal responsibility to put a new sewer network in place.

We've accepted an application for your area, which is why we're getting ready to start this work.

firsttimesewerage@anglianwater.co.uk or call us on **03457 145 145**. You'll just need to mention the reference number at the top of this letter.

To get the latest on what's happening in your area just head to **anglianwater.co.uk/check** and pop in your postcode.

Many thanks,

Chloe Bailey
Customer Experience Coordinator
